WORK EXPERIENCE

Software Engineer | [Red7Systems](#)

March 2026 – Present

React, Node.js/Express, TypeScript, PostgreSQL, AWS, Cloudflare, Python, Playwright

- Built a production Model Context Protocol (MCP) server exposing 122 role-gated tools with OAuth 2.1 + PKCE auth, backed by an Aurora PostgreSQL system-of-record (35 tables, audit ledger, row-level security) and a React + Express console routing all writes through audited tools.
- Led an authenticated security assessment of a customer portal and SaaS platform, discovering a CVSS 7.9 authentication bypass (silent account takeover) and a CVSS 6.4 IDOR exposing full customer PII, with reporting mapped to CCPA/GDPR exposure.
- Cut a core query from ~25s to under 1s (~96% faster) via composite indexing across 5 Aurora MySQL tables (~6.5M rows), then built a zero-downtime slow-query alerting pipeline (Aurora → CloudWatch → Kinesis Firehose → New Relic).
- Architected a multi-tenant cookie-consent platform on Cloudflare Workers/D1 (11-table schema, JWT auth) with GDPR/CCPA geo-compliance across 32 countries and 20 US state laws, validated by a 170+ invariant automated test suite.
- Architected a Zero Trust access layer integrating Cloudflare Zero Trust with Microsoft Entra ID via SAML to replace legacy VPN, enforcing Conditional Access and Intune compliance (MFA, device compliance, BitLocker key escrow).
- Built a multi-source prospect database in PostgreSQL (7 normalized tables) that deduplicated raw scrape output into 1,726 qualified prospects across 73 metros, plus a text classifier surfacing 541 target dealers with zero false positives.
- Rebuilt the company marketing site from a legacy WordPress theme into a mobile-first React 18 SPA on Docker + AWS App Runner, using single-template routing that eliminated ~30 duplicate components and cut hero image payload by 67.5%.
- Automated a Python + Playwright scraper against a lazy-loading AngularJS grid that recovered 100% of rows (vs. 52% on a naive pass) across 285 batch exports, and built a 177-test Playwright QA suite spanning 7 browser/viewport targets.

Web Developer (Contract) | [GOLFI](#)

October 2025 – March 2026

- Boosted weekly site traffic by 728% (from ~58 to ~480 visits) in 2 weeks through SEO optimization, UX improvements, and targeted campaign promotion.
- Raised Google Lighthouse score from 68 to 92 and increased organic search impressions by 45% through performance and SEO work.
- Grew page views from ~200 to ~920/week and weekly visits from ~350 to 960 via data-driven navigation, layout, and content optimization.
- Redesigned the Tailor Brands website, collaborating cross-functionally with marketing and design teams to align updates with brand goals.

Front-end Developer (Contract) | [UniquelyMe](#)

March 2025 – September 2025

Astro.js, JavaScript, HTML, CSS

- Reduced page payloads from 100MB+ to ~430KB by optimizing media assets, improving load performance on mobile and low-bandwidth devices.
- Elevated Google Lighthouse scores from 70+ to 90+ and decreased load times by ~39% by optimizing Core Web Vitals and front-end performance.
- Translated Figma designs into pixel-accurate, responsive UI and refactored legacy CSS for improved maintainability and scalability.
- Implemented responsive, mobile-first layouts (CSS media queries, Flexbox/Grid) for a consistent experience across desktop, tablet, and mobile.

PROJECTS

Full-Stack (Next.js, React, TypeScript, Tailwind CSS) — Prompt Creation Website, Car Rental Dashboard, Anime Vault

SKILLS

Languages | JavaScript, TypeScript, Python, VB.NET, SQL

Front-end | React, Next.js, Astro.js, HTML, Tailwind CSS

Back-end & Data | Node.js, Express, PostgreSQL, MySQL, Aurora

Cloud & DevOps | AWS (Lightsail, RDS, CloudFront, App Runner), Cloudflare (Workers, D1, Zero Trust), Docker, CloudWatch

Security | OAuth 2.1 / PKCE, SAML, Microsoft Entra ID, Intune, CSP, Security Assessment (CVSS), GDPR / CCPA

Testing & Tools | Playwright, WCAG 2.1 AA, New Relic, Git, GitHub, GitLab, WordPress, Shopify

EDUCATION

California State Polytechnic University, Pomona

May 2023

B.S. Computer Information Systems (Application Development)
