WORK EXPERIENCE

Software Engineer | Red7Systems

March 2026 – Present

React, Node.js/Express, TypeScript, PostgreSQL, AWS, Cloudflare, Python, Playwright

- Built an MCP server that lets AI agents safely use 162 internal tools — combining OAuth 2.1 + PKCE login, role-based permissions, and full audit logging, so every action an agent takes is traceable back to who or what triggered it.
- Found a critical auth bypass (silent account takeover) and an IDOR exposing customer PII in a security assessment, reporting both against CCPA/GDPR exposure.
- Cut a core query from ~25s to under 1s (96% faster) via composite indexing across 6.5M rows, removing a customer-facing slowdown on a high-traffic page.
- Built a zero-downtime alerting pipeline that flags any query over 5 seconds within ~2 minutes (Aurora log → CloudWatch → Kinesis → New Relic).
- Kept the site GDPR/CCPA compliant across 32 countries and 20 US state laws with a multi-tenant cookie-consent platform on Cloudflare Workers — validated by 170+ automated tests.
- Eliminated the legacy VPN and its ops overhead — and an entire attack surface — by rolling out a Zero Trust access layer with MFA and device compliance (Cloudflare, Entra ID, Intune).
- Consolidated raw scrape output into a prospect database, deduplicating listings to 1,726 qualified prospects across 73 metros and correctly surfacing 541 target dealers.
- Rebuilt the marketing site from legacy WordPress into a mobile-first React app on AWS — deleting ~30 duplicate components and cutting hero payload 67.5%.
- Integrated a Shopify storefront with the platform — syncing 72 products with zero listing gaps and securing webhooks with HMAC signature checks.
- Automated a scraper that recovered 100% of rows (vs. 52% on a naive pass) across 285 exports, and built a 177-test Playwright suite across 7 browser/viewport targets.

Web Developer (Contract) | GOLFI

October 2025 – March 2026

Tailor Brands low code/no code platform

- Grew weekly site traffic 728% (58 → 480 visits) and page views to ~920 in two weeks.
- Raised Google Lighthouse from 68 to 92 and boosted organic search impressions 45% through performance and SEO work.
- Led the end-to-end Tailor Brands site redesign, aligning marketing and design on one brand experience.

Front-end Developer (Contract) | UniquelyMe

March 2025 – September 2025

Astro.js, JavaScript, HTML, CSS

- Cut page payloads from 100MB+ to ~430KB, making the site load fast on mobile and low-bandwidth devices.
- Raised Lighthouse scores from 70+ to 90+ and cut load times ~39% by optimizing Core Web Vitals.
- Shipped pixel-accurate, mobile-first UI across desktop, tablet, and mobile from Figma designs — refactoring legacy CSS for faster loads and cleaner maintenance.
- Resolved complex CSS bugs (responsive layouts, specificity conflicts, cross-browser inconsistencies) and Git merge conflicts, keeping the codebase stable and maintainable.

PROJECTS

Full-Stack (Next.js, React, TypeScript, Tailwind CSS) — Prompt Creation Website, Car Rental Dashboard, Anime Vault

AI Engineering (Python, FastAPI, RAG, Hybrid Vector Search, ChromaDB, Qdrant, Ollama, Anthropic API, Voyage) —

Security/Compliance RAG Assistant, RAG API with FastAPI

SKILLS

Languages | JavaScript, TypeScript, Python, VB.NET, SQL

Front-end | React, Next.js, Astro.js, HTML, Tailwind CSS

Back-end & Data | Node.js, Express, PostgreSQL, MySQL, Aurora

AI/ML | LLM tool-calling & agent architecture (MCP), Claude Code, AI-assisted development, RAG, embeddings, evaluation, prompt engineering

Cloud & DevOps | AWS (Lightsail, RDS, CloudFront, App Runner), Cloudflare (Workers, D1, Zero Trust), Docker, CloudWatch

Testing & Tools | Playwright, WCAG 2.1 AA, New Relic, Git, GitHub, GitLab, WordPress, Shopify

EDUCATION

California State Polytechnic University, Pomona — May 2023

B.S. Computer Information Systems (Application Development)
